

## HMS121

### (End Pivot Sealer with Control Box / Power Pack)

<b>Maximum Sealing Length</b>	400mm (12.5") – 700mm (27.5")
<b>Seal Width</b>	6mm (Wide Seal), Seal Only or T-Wire (Seal-Cut-Seal)
<b>Film Thickness</b>	1000µm approx.. (4000g)
<b>Voltage</b>	230V, 115V (Power Pack)
<b>Jaw Opening</b>	25mm approx.
<b>Weight</b>	10 kg – 15 kg
<b>Operation</b>	Hand Operated (with Digital Controller & Hold Down Latch), Settings password protected, Push Button or Foot Switch
<b>Mounting</b>	Bench Mounted
<b>Options</b>	Powder Coated Mild Steel or Stainless Steel Power Pack, Electro Magnet Hold Down for weld cycle

The **HMS 121** – Ergonomic handle with Hold Down Latch for ease of use.

These heavy duty end pivot sealers offer an ideal solution when a hand operated sealer is required for larger applications.

The above shows an end pivot machine with a Hold Down Latch.

These machines come with a remote Control Box/Power Pack attached via a 2 metre 7 way cable enabling the electronic controls to be situated away from the sealing head.

This is very useful when the machine is to be used in a containment or glove box.

The machine produces a 6mm (Wide Seal) on a selection of materials.

The Control Box has a Dual Electronic Timer fitted, which enables the heating and cooling cycles to be adjusted for various films and bags.

Due to the pivot action, material containing the product can be drawn completely over the sealing area before closing the jaw and sealing the bag.

The sealing cycle is initiated with either a Push Button or Foot Switch, which enables the operator to ensure the material, is positioned correctly before the seal is produced.
